1) Write a python program to increase the blue value of pixels by 20% and to decrease the green value by 30%. Use the picture whitehouse.jpg to test your program.

2) Write a function to swap the values colors:

   a) Swap the red value with the blue value.
   b) Swap red with blue, blue with green and green with red.
      That is red becomes blue, blue become green and green become red.
